

**Adventist**  
**La Grange Memorial Hospital**

Keeping you well

January 3, 2011

To whom it may concern.

YMI has completed two major mechanical projects here at Adventist La Grange Memorial Hospital.

# 1 Replaced two direct fired Absorption Chillers with a multiple compressor Scroll Chiller, and added two high efficiency non condensing type hot water boilers, per provided Engineering specifications.

# 2 replaced two existing air handlers with one new larger capacity air handler with variable frequency drive, which serves the new Wound Care Center project, new duct work, chilled water piping, heating piping, insulation, were also under YMI's scope of work.

They have also completed several service type calls on HVAC equipment over the last 12 month period.

All work was completed in a professional manner and showed a high degree of skill in welding, Management are very diligent in following through with all aspects of the project, good communication, a caring attitude, and prompt return of project close out documents which are essential to the owner.

We here at ALMH look forward to future projects with YMI they are a welcome addition to the Mechanical Contractors fraternity serving the piping and HVAC industry here in Illinois.

Sincerely,

A handwritten signature in black ink that reads "Michael B. Cole".

Michael B. Cole, CFM  
Director of Facilities
